

QUAD-STEER ARTICULATING TANK

Haul large volumes without sacrificing flotation & maneuverability

TOP LOAD CONFIGURATION

The Quad-Steer articulating tank with tri-axle electronic steering will allow for easy turning with minimal ground disturbance. Drum brakes on all tires are standard.

ELECTRONIC STEERING

The steer angle of the tank is automatically restricted with higher speeds

LARGE DIAMETER TIRES

Alliance 35.5 x 32 R for greater flotation. Optional Tire Inflation System

FRONT PUMP SYSTEM

Header Series Front Pump unloads faster than the competition at 3000 GPM!

AVAILABLE CAPACITIES

Available in 12,000 - 16,000 US GAL capacities and top load, vacuum & injection configurations

QUAD-STEER ARTICULATING TANK

Haul large volumes without sacrificing flotation & maneuverability

ADVANTAGES OF ELECTRONIC STEERING

SAFE AND STABLE STEERING

With electronic steering, the steer angle of the tanker is automatically restricted with higher speeds. This increases the stability and safety of the tank as well as making it very driver-friendly. In other steering systems, an inexperienced operator could forget to turn the steering off which results in losing control at high speed; or if they forget to turn it back on and make a turn, they can break an axle or jack knife. This problem is eliminated with electronic steering.

PRECISION STEERING

The Nuhn Electra-Steer is engineered to steer the tank the exact angle when making a turn, and even steers while backing up!

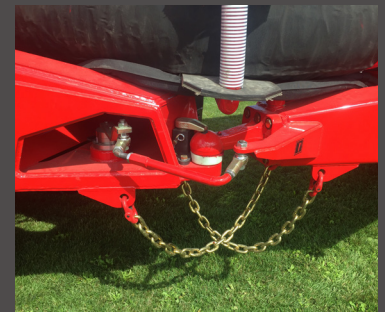

HYDRAULIC ROCK TRAP

AUTO GREASE SYSTEM
Optional

WEIGHT TRANSFER KIT
Optional

ARTICULATING BALL HITCH
